Autodesk AutoCAD is a commercial computer-aided design and drafting software application, designed specifically for the construction, architecture, engineering, and related fields. Since its introduction, AutoCAD has been used in a wide variety of industries, including architecture, manufacturing, construction, real estate, engineering, and product design. The AutoCAD program is used to design and draft two- and three-dimensional buildings, architectural projects, equipment, mechanical and other assemblies, models, graphics, and forms. It is also used for related applications including cost analysis, cost estimation, and cost-benefit analysis. AutoCAD Architecture Features The AutoCAD Architecture software is focused on architectural, engineering and related industries. Below are some of its most useful features: More Features of AutoCAD Architecture New in AutoCAD 2020, you can now draw AutoCAD DWG objects using the fully interactive 3D Drafting and Modeling functionality. In AutoCAD Architecture, you can create a building plan based on a 3D model. Just select a point on a surface, and drag to draw a line. Then move your cursor along that line to create a polyline with just a click of the mouse. This feature is great for both architects and building owners as it allows them to create a plan of any project from the ground up. In AutoCAD Architecture, you can also draw a 3D model of your project. Just click on a point in the drawing window and, with a click of the mouse, draw a line. Then use your mouse to zoom in or out to see the entire model. You can also use standard 2D drafting tools to create your model. Drawing Features in AutoCAD Architecture Other notable features of the AutoCAD Architecture software include: You can interact with your model by moving and rotating it. This is the most intuitive way to view a model of any project in 3D. AutoCAD Architecture's advanced drawing tools work with the model to let you see the building floorplan as you work with it. You can use any standard 2D tools in AutoCAD Architecture to sketch or mark objects on your model. You can create 3D objects directly from the drawing window. Just select one of the objects that you want to duplicate, and click the Duplicate button in
